The committee's main focus in 2014-2015 was preparing, polishing, and advertising a presentation to educate/promote what engineering is, and what engineers do. This was created for the “Engineers in Schools” program, aimed at children aged between Grades 6 -10.

Several presentations were delivered throughout the year, to “test” the quality and impact of the presentation, and refine it as we progressed.

Suggestions on other initiatives are welcome, to promote our profession and association to the public. Some of our previous committees have developed to a point of being self-sufficient, and the committee is looking for new ideas to work on.
