### Position and Responsibilities

Reporting to Chief Maintenance Engineer in the maintenance engineering department, your knowledge of mechanical equipment and design will be relied upon to support surface and underground operations. You will be required to solve complex technical problems using formal techniques to evaluate systems, equipment and failures. You will maximize equipment availability, reliability and performance through effective problem solving, root cause failure analysis and proactive maintenance practices. This will involve developing and refining asset specific strategies to improve equipment health and to prevent or eliminate equipment failure.

### Education and Qualifications

Requirements of the position:

- Bachelor's degree in mechanical or industrial engineering
- Four to eight years of relevant industry experience
- Equivalent combination of education and work experience will also be considered
- You must be eligible for registration with the Association of Professional Engineers and Geoscientists of Saskatchewan (APEGS)
- Strong communication and problem-solving skills
- Work a rotational schedule and commute to site by aircraft

Assets:

- Exposure to predictive maintenance techniques and technologies
- Experience in an underground mining environment
- Experience with computerized maintenance management system, preference for SAP experience
- Project Management Professional (PMP Certification)

Preference will be given to Residents of Saskatchewan's North (RSN).

*Safety is a top priority at Cameco. Successful candidates for all positions at safety-sensitive sites or in safety-sensitive positions must take and pass a substance test (which includes marijuana testing) as a condition of employment. Marijuana remains in a user's system for about 30 days, so applicants who recently used marijuana recreationally should not expect to pass a substance test.*
